Notes

CR BDSH parallel bridges shall be used only with unprepared conductors up to 1,5 mm² / 16 AWG.

The rated current applies to the conductor used to feed the CR BDSH parallel bridge, it applies to the above indicated maximum wire size and is distributed to all pins in parallel in a manner inversely proportional to the impedance of the served branch circuit. When all branches are with identical impedance, the current is equally divided by the number of served branches in parallel.

Dimensions shown in mm are not binding and may be changed without notice.
